

Warmup

1. π is a number that helps us with calculating area, volume and circumference of circles. The first 50 digits of π are
3.14159265358979323846264338327950288419716939937510

What value for π should you use in this class? _____

2. Calculate Area:

3. Find the circumference.

4. What is the volume of the rectangular prism?

- I. Cylinders
- II. Volume of a Cylinder
- III. Surface Area of a Cylinder

I. Cylinders

Cylinder: A 3-dimensional figure that has two circular bases.

Base: The top and bottom of the cylinder. The bases are circles.

Height: The distance between the two bases.

A net of a cylinder

5. Which of the following nets will make a cylinder?

II. Volume of a Cylinder

To find the **volume** of an object multiple the area of the base times the height.

$$V = \pi r^2 h$$

1. Write the Formula
2. Substitute the known values
3. Simplify
4. Write the Units
5. Check – Does the answer make sense?

6. Calculate the volume of a cylinder with a radius of 10 km and a height of 5 km.

7. Calculate the volume of a cylinder with a diameter of 18 km and a height of 3 km.

8. Write the steps for solving formula questions.

_____ Write the formula.

_____ Determine the known values.

_____ Check the answer to ensure it makes sense.

_____ Substitute the known values into the formula.

_____ Write the units after the answer.

_____ Simplify and if necessary solve for the unknown variable.

III. Surface Area of a Cylinder

To find the **total surface area** of an object find the area of each face.
Draw the net of the object to help 'see' each surface.

TSA = Area of the top base + Area of the bottom base + area of the rectangular side

$$\text{TSA} = \pi r^2 + \pi r^2 + \pi dh$$

$$\text{TSA} = 2\pi r^2 + \pi dh$$

9. Calculate the total surface area of a cylinder with a diameter of 20 feet and a height of 3 feet.
